## COCKPIT

## COMPLETE COMMAND CENTER AT YOUR DESK

**CENTRALIZED OPERATION FROM ONE SINGLE DESK POSITION.**

**INTEGRATION WITH YOUR COMPANY'S SYSTEMS**

**UNIFIED COMMUNICATION**

**REMOTE DESKTOP OPERATION**

## MULTIVIS COCKPIT IS THE EVOLUTION OF CONTROL CENTERS

Huge amount of data powered by BI tools and Artificial Intelligence layers runs in nowadays Operation Rooms, handling alarms and events and taking automatic decisions which make things easier for the operators, letting them concentrate into what really matters: your core business.

The Control Room Operator today is capable of controlling the whole process from his desk: the only thing needed is a powerful and flexible tool to integrate every single information on his workstation.

The variety of available applications is quite extensive: Remote Desktops, Virtual Machines and Applications, Surveillance Cameras and VMSs, corporate and business applications, local video inputs, video conference and communication systems, SoftPhone and diverse web content.

MultiVis Cockpit can act as a no-boundary network KVM, controlling up to eight remote terminals or virtual machines, no matter what the operating system. The desktop can be opened, positioned and resized as you see fit, with a simultaneous mouse and keyboard control the operator can smoothly change from one desktop to another by simply moving the cursor through the windows.

The operator can monitor and control cameras, make calls andvideo conference, check their email, issue an invoice over their ERP, monitor a SCADA source, navigate the web, access and control the entire BMS.
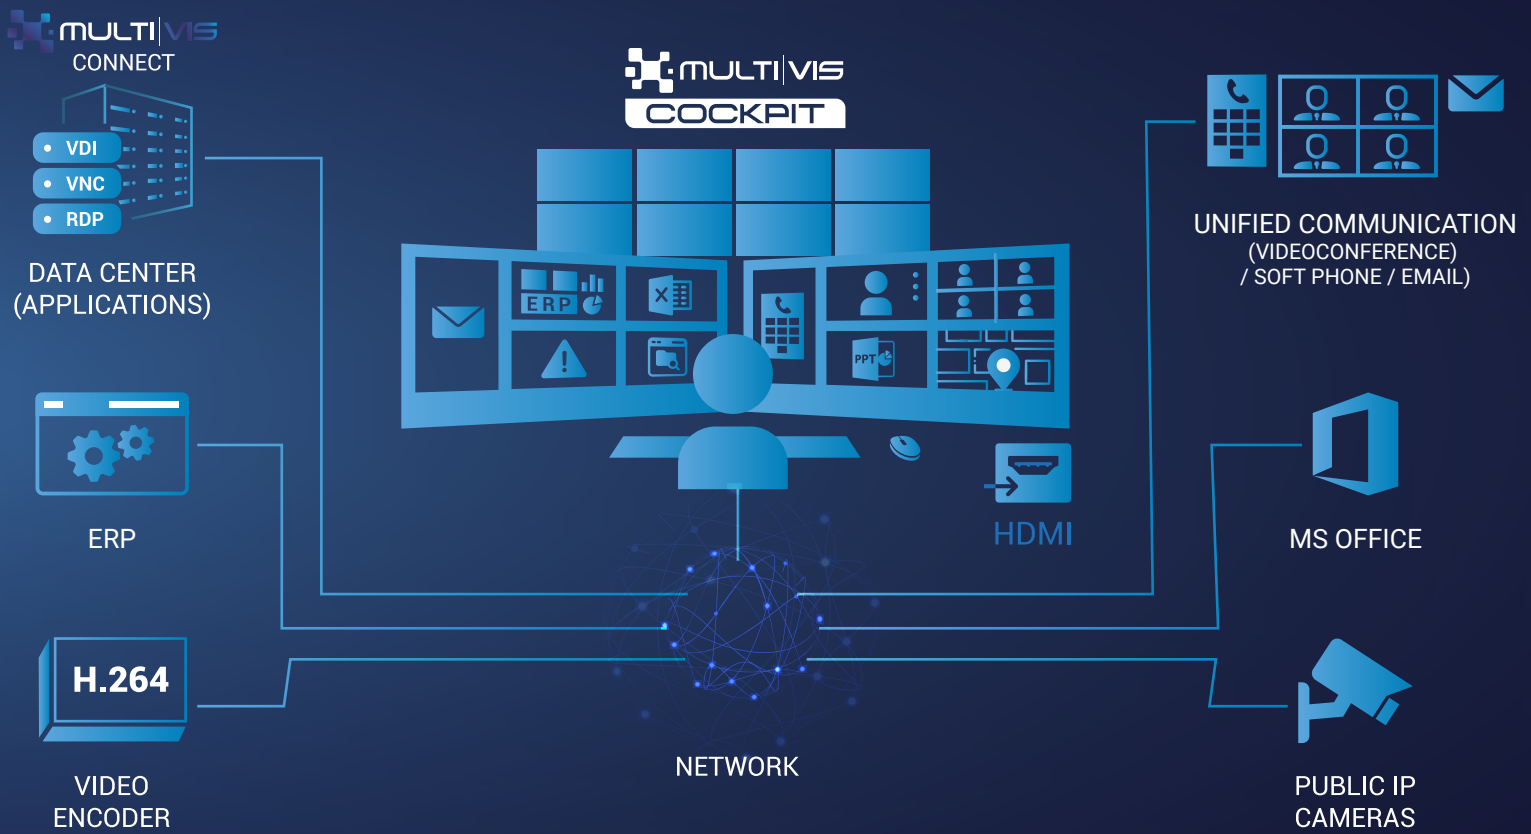

Its high resolution  and the 16 Mpixels canvas allows the operator to open as many application as needed, either recalling presets or running applications on the fly on a dynamic operation workflow.
